

Black Box is a leading technology solutions provider that specialises in complete high-performance KVM, professional A/V, signal distribution, and extension and switching solutions for control rooms, broadcast, and other mission-critical applications. KVM solutions allow computers/workplaces to be housed at separate locations, making it possible to store media assets/hardware and distribute them throughout a post-production facility. This makes it easier for editors, producers and directors to instantly communicate with animators and colorists by accessing all needed equipment via KVM peripheral matrix switching. Our products serve broadcast applications such as: Master-/Studio Control Room, OBV (Outside Broadcast Van), Broadcast Operation/Control, Broadcast Payout, Real Time Graphics and Post Production edit suites.
