

D.O. Design Studio is a corporation originally active in Industrial Design.

The knowledge acquired in the field of 3D scanning and computer modelling in the automotive industry allowed the company to diversify later (product design, cultural heritage restoration, R&D in 3D scanning).

D.O. Design Studio is the founding member of the Liège 3D Digital Pole, which brings together 10 companies, all active in complementary fields and related to digital technologies.

Recently, D.O. Design Studio decided to carry out the Memoikos project, a collective that brings together members of private and public institutions, and which has set itself the mission of making the local heritage alive or revived, both here and abroad, by relying in particular on the know-how of the 3D Pole.
