

For over 20 years, EVS has been the leader in technology that enables the production and delivery of live enriched video programming. Recognised across the globe for the reliability, speed and flexibility of its systems, EVS helps its customers to become more efficient and ultimately more creative.

In 1994, the EVS Live Slow Motion system revolutionized live broadcasting. Since then, EVS has gone on to develop practical innovations that address four key markets – Sports, Entertainment, News and Media – including the XT3 advanced live production server, the new XS next generation server, the content management suite IPDirector and the cloud-based C-Cast connected content platform for instant multi-screen production and delivery. EVS systems are used by broadcasters, TV production companies, post-production facilities, content owners and archive libraries.

EVS is headquartered in Belgium and has over 20 offices across Europe, the Middle East, Asia Pacific, North and Latin America. The company employs more than 500 people and is publicly traded on Euronext Brussels: EVS, ISIN: BE0003820371.
