Innovation center, Video software solutions, Machine vision applications and prototypes.

MULTITEL, an innovation center, consists of a multidisciplinary team of highly qualified research engineers active in the domains of man-machine interfaces, image processing, applied photonics, networking (computer network processing) and certification.

MULTITEL consolidates its position as a player on a European level by participating in numerous projects, partially financed by the European Commission. It confirms its position with projects in the transport, logistic and aeronautical domains as well as in other research programmes financed by the Walloon Region.

Besides its research and development activities, MULTITEL offers services in the domains of computer network processing, prototyping and optical metrology, industrial vision, electronic prototyping, certification, etc.

Finally, MULTITEL offers training and organises conferences to discuss the latest developed technologies. Multitel is the first training center certified with the Red Hat label in Belgium.

Multitel

Rue Pierre et Marie Curie, 2
7000 Mons
